

Lab Submission:

Once a lab is posted:

- Fork lab/project Repo
- Save to your repo
- Click Clone (use ssh)
- In terminal, navigate to where you want to save the file (your GA stuff)
- git clone (paste in link)
- cd into that new directory
- git status (will show master)
- git checkout -b 'working'
- git status (should show working)
- Launch jupyter notebook to view the lab!
- Make changes to/work on lab - be sure to save your work!

Once you're finished with your lab:

- git status (should still show working)
- git add name_of_file
- git commit -m 'changed stuff'
- git push origin working
 - Now will show working branch on your github
 - Now can issue a pull request
- Make sure you're on branch 'working'
- Click New Pull Request
 - Base Fork will be DSI, Base will be Master
 - Head Fork will be your repo, Compare: working
 - Add comments if you want
 - Submit
